AMITO

Weed-Free Crop & Bountiful Harvest

Dose:
1 kg
Per Acre

AMITO (Ametryn 80% WG)

Mode of Action ►

Amito is a Wettable Granule containing Ametryn 80% (a.i) in the formulation. It is used for the control of grassy weeds and broadleaf weeds on Sugarcane.

Impedes electron transportation in photosystem II of the photosynthetic reaction in plants/weeds, prompts the building of free radicals (powerful biological oxidants) that bombard and demolish the integrity of cell membranes.

- **New selective early post herbicide with broad spectrum activity on grasses and broad-leaved weeds.**
- **S-triazines chemical group, which impedes Photosynthetic reaction and other enzymatic processes. Highly volatile and does not leach into groundwater.**
- **Provides a longer duration of weed control and shields sugarcane from the early slow growth of sugarcane tillers from weed competition.**
- **A selective systemic herbicide, absorbed by the leaves and roots, with translocation activity.**

Recommendation ►

Crop (S)	Common Name of Weeds	Dosage / HA		Dilution in water (Litre)
		ai (gm)	Formulation (ml)	
Sugarcane	Digitaria sanguinalis Cynodon dactylon, Trianthema monogyna, Ageratum conyzoides, Dactyloctenium aegyptium	2.0	2.5	500

Method of use ►

Measure out required quantity of Ametryn 80% WG and mix it well with required quantity of water and spray by using Knapsack sprayer fitted with flat fan nozzle with spray volume @ 500 L/ha. Apply at 25 days after planting. Avoid using near aquaculture.

Crop Stage for application: 2-3 leaf stage of weeds

Time of Application ►

Apply at 25 days after planting.

Application Timing: Preferably in the morning and evening hours.
