VYPYR

(Pyrazosulfuron Ethyl 10% WP)

Mode of Action ►

Vypyr is a selective, systemic and pre emergence herbicide which effectively controls the various weeds of transplanted rice. Safe for growth of Rice crop in nursery and main field.

Recommendation ►

Crop (S)	Common Name of Weeds	Dosage / HA		Dilution in water (Litre)
		ai (kg)	Formulation (kg)	
Transplanted Rice	Cyperus iria, Cyperus difformis, Fimbristylis miliacea, Ludwigia parviflora, Monochoria vaginalis,	0.01-0.015	0.1-0.15	500-600

Method of Use ►

As per the recommendation, mix the Vypyr and water at right dosage and spray by using high volume sprayer, viz. knapsack sprayer fitted with herbicide nozzle. Use 500 to 600 litres of water per hectare. Before spraying the Vypyr, it's suspension should be mixed thoroughly with a wooden log.

Time of Application ►

Spray should be given, before emergence of weeds, at 3-7 days after transplanting of rice.
